EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eugene J. Rosenthal on 11/10/06.

The application has been amended as follows:

- Claim 31 has been amended as follows:

On line 1, the number "30" has been deleted.

- Claim 43 has been rewritten as follows:

A method of transmitting data in a synchronous hierarchic network system comprising at least a path segment between a first network element and at least a second network element on which tandem connection monitoring method is established for monitoring transmission of information over the path segment, the method comprising:

detecting a frame offset discontinuity condition indicating frame offset discontinuities at the first network element on the basis of detection of an alteration of a pointer value other than pointer justification,

wherein, during a time interval necessary for detection and signalling to the second network element of the frame offset discontinuity condition, transmitting to the second network element a last valid pointer value received in advance of the discontinuity condition,

wherein, in response to detection of the frame offset discontinuity condition, at the first network element stepwise altering received pointer values for subsequent transmission.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Regarding claim 43,

The prior art of record does not teach or fairly suggest a method of transmitting data comprising detecting a frame offset discontinuity condition, wherein during a time interval necessary for detection and signaling to the second network element of the frame offset discontinuity condition, transmitting to the second network element a last valid pointer value, and wherein in response to detection of the frame offset discontinuity condition, at the first network element stepwise altering received pointer values for subsequent transmission.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
